Summary

I am a front-end developer, familiar with back-end, knowledgeable of HTML, CSS, Javascript, Git/Github, jQuery, Bootstrap, node.js, express.js, mysql, and React. I am truly enthusiastic about designing and developing web pages, solving problems, and learning new things. One of my strongest assets is that I do not mind going the extra mile, whether it means helping a stranger find the nearest train station or spending hours trying to fix that one bug in my code. Overall, I believe that consistency, hard work, and patience will eventually lead to success.

Experience

Holter Analyst
NewYork-Presbyterian Hospital

May 2017 - Present (4 years 2 months +)
• Scan and analyze data from cardiac-function monitoring devices worn by patients for use in diagnosis of cardiovascular disorders.
